PROJECTS

Scholapedia - University Project | [View Project](#)

- Developed Scholapedia, an E-Learning System that integrates user authentication, course management, and interactive learning modules, with an **AI chatbot** built with the **OpenAI API** to offer real-time assistance.
- Developed a secure **C#** backend with the **.NET** Framework, supporting user management and content tracking via CRUD operations, with data stored in **SQL Server**.
- Designed a responsive and intuitive UI using **HTML5**, **CSS**, and **JavaScript**, ensuring seamless navigation and accessibility across devices.

Redesign Easybook.com - University Project | [View Project](#)

- Redesigning Easybook.com using Figma**, enhancing **UI/UX** for a more intuitive, visually appealing, and user-friendly experience.
- Optimizing booking operations and user flow**, improving navigation, accessibility, and overall functionality for seamless transactions.
- Applying modern design principles and user-centered methodologies**, ensuring a responsive, aesthetically pleasing, and efficient interface.

AI Chatbot Assistant for Grab Food Merchant - UM Hackathon | [View Project](#)

- Developed a functional prototype for Grab Food merchants featuring a **user-friendly dashboard** to track performance metrics and gain actionable insights.
- Built an **AI-powered chatbot** using the **ChatGPT API**, integrated via **n8n**, to assist merchants in interpreting analytics and generating personalized business recommendations.
- Implemented additional features such as **smart alert notifications**, **multilingual language support**, and dynamic graph types for enhanced **data visualization**.
